PROJECTS

- **Crop Disease Detection Portal | [GitHub](#)** Mar '25
 - Built a Crop Disease Detection Portal using ML (CNN-based image classification) that identifies plant diseases from *real-time uploaded crop images* with high accuracy.
 - Integrated OpenCV for image preprocessing, TensorFlow/Keras for model training, and Gradio for seamless prediction on the web portal.
 - Designed an interactive dashboard with disease insights, remedy suggestions, confidence scores, and image history tracking, improving farmers' decision-making and reducing diagnosis time.Tech Used: Gradio, Google colab, Python
- **Arduino UNO Fire Alarm Sensor** Oct '23
 - Developed a fire-alarm detection system using Arduino Uno that triggers a loud buzzer when exposed to abnormal heat levels.
 - Integrated DHT11/LM35 temperature sensor with real-time threshold monitoring and programmed safe-limit alerts using embedded C.
 - Built a compact hardware prototype with LED indicators, buzzer output, and serial monitoring, enhancing early fire-risk detection reliability. Tech Stack: Arduino UNO, BreadBoard, Temperature sensor, Proteus.
